PHISHGUARD WEBSITE DEVELOPMENT PROJECT

- **Final Deliverable Guidelines**
 - Use cases
 - User Interface (UI) Design
 - Group Presentation

COURSE PROJECT

The **PhishGuard** Web Application Development Project

- The web application will be focused on cybersecurity education.
 - It will be designed to:
 - help users learn how to identify phishing attempts,
 - test their skills with quizzes, and
 - defend themselves with practical tools like a phishing scanner.
- The platform will blend education with interactivity, making cybersecurity awareness both engaging and useful.

USE CASES

- Use cases describe **user's interaction** with the software product that is being developed.

- **Use Case Template**

- **Each individual team member needs to describe at least 5 use cases.**
- Therefore, if there are three members in your team, you need to write **15 use case descriptions**.

UI DESIGN (PROTOTYPE)

- You will also create a prototype for the website. The prototype that you create should be according to the use cases you write.
- **Example prototype:**
 - <https://xd.adobe.com/view/452a615f-c000-46a4-65d2-8722f0a3a688-331b/?fullscreen> (This was an initial draft. **Note that this is not the final submission** by the team)

PRESENTATION

- **Each team will do a 10-15 minute presentation**
 - Please note that it is mandatory for each member of the group to present some part of the project.
- **Your group will present the following things:**
 - You will provide an **overview of the website**:
 - The need/motivation for developing the website (i.e., how is developing this website beneficial?).
 - The **actors (i.e., potential end-users)** your group identified.
 - You will **explain your top 4-5 use cases**
 - You will **demo your website prototype**.
 - You will provide a **description of each team member's contribution to the project**.
