- (5) Angelee Sullivan-Quintana

1. Research the market space and find out if similar digital platforms already exist?

Website Name	Link	Similarities with PhishGuard (provide a brief description of the similarities)
KnowBe4	https://www.knowbe4.com/products/human-risk-management-plus	phishing training, simulated attacks, security awareness education
HoxHunt	https://hoxhunt.com/how-it-works	phishing and security awareness training, use of AI, phishing simulations
Phished	https://phished.io/security-awareness-training	phishing and security awareness training, phishing simulations, course style
Barracuda	https://www.barracuda.com/products/email-protection/plans#tabNav	Email protection, phishing and security awareness training, phishing simulations
Microsoft Security-Attack Simulation Training	https://www.microsoft.com/en-us/security/business/threat-protection/attack-simulation-training	Phishing attack simulations, testing
America's Cyber Defense Agency	https://www.cisa.gov/audiences/small-and-medium-businesses/secure-your-business/teach-employees-avoid-phishing	Security awareness, modules

2. What programming tools/programming-languages/database-software are needed to create such a website? (Ant)

Tool/Programming Language/database software	What would the tool/programming language be used for when developing the website?
AI/LLM api key	AI integration risk score classification, gen phish emails
web server (node?)	web front & backend
Mongodb	database, store users etc.
Stripe	handle payment info securely
Javascript (node)	web front/back (node)
Linux	App will be on Linux
Nginx	web server (proxy back to app)
Azure	host the web application on Azure

Some Phish/learning library or platform that can be integrated?	
HaveIBeenPwnedApi	breach checker
Virus total	Check malicious files

3. Who are the potential users of the PhishGuard platform? (Angelee)

User Type	What features does this user need?
business/university	Phishing training, performance dashboard, risk reports, simulated phishing tests.
student/researchers	AI-based phishing detection, research dataset access, API integration, threat insights.
individuals/employees	Browser extension/app, Real-time URL & email scanning, credential protection, instant security alerts.
Remote/Hybrid workforce	Cloud email protection, mobile phishing detection, collaboration tool scanning, cross-device protection.
Parents/Family Accounts	Parental controls, suspicious website blocking, kid-friendly phishing lessons and mobile alerts.
IT & Security Administrators	Threat analytics dashboard, SIEM integration, automated response, email quarantine & reporting.
Educational Institutions (K-12 Schools)	Real-time email & website phishing detection, safe browsing protection for school devices, simple cybersecurity lessons for students, teacher/admin monitoring dashboard, easy phishing report button.

4. Update the following table with a list of questions or queries that your team has for the Project Sponsors (or end-users). Please be as descriptive as possible.

Question #	Question
1	Who is the primary user the system should be designed for (ex: students, employees, business organizations, individuals, etc.)?
2	Will this service be free or behind a paywall or a mixture of both?
3	Should there be different dashboards for students, employees, admins, etc. ?

4	Should creating an account be mandatory or will there be some features that can be accessed without creating an account?
5	What level of accuracy is expected from the AI phishing detection?
6	Should the AI provide an explanation for why something is marked as phishing?
7	How fast should the scanner respond to a user request?
8	Should the quizzes be multiple choice or can they be scenario based as well?
9	Should the progress be saved automatically or the user would have to click save to save module progress and quiz progress?
10	Should the future modules be locked till the user completes the previous module and passes the quiz?
11	Should the leaderboard be ranked based on the number of badges or points a user has collected?
12	What controls should admins have over users and what additional features will they have that the users don't have access to?

5. (a) Based on your market analysis, please answer the following question: Does the need for a product like PhishGuard exist?

Most phishing education is catered to large scale operations or corporations. There is an entire sector of the common consumer that has been left untapped. The common consumer is just as affected by phishing as corporations and deserve to know how to spot and prevent falling victim to phishing. Therefore, we are thinking about catering our product to them.

(b) Next, provide a list of reasons why you think a product like PhishGuard will be beneficial to its potential end users. Please provide a brief description for each reason you cite.

Phishing often happens over email and email is accessible to everyone including children and seniors who may have limited technological knowledge. So this product will educate them about it.

Informational modules that use simplified language to reduce technical jargon fatigue, this will make it easy for the seniors to understand.

Children's module simplifies the language significantly more to cater to their level of understanding and also provide visuals that will catch their interest.

Providing a free plug-in scanner for potential phishing as a reward for passing the training incentivises the user to complete and understand the training.
